

# LINUX

## VirtualBox

VirtualBox is a free and open-source virtualization software that acts as a hypervisor. It allows you to create and run virtual machines (VMs) on your computer, which are isolated environments that can run different operating systems simultaneously. Here's a brief explanation of VirtualBox and why you should use it to install Linux:

## Ubuntu

Ubuntu is a beginner-friendly Linux distribution known for its ease of use and versatility, making it an ideal choice for your DevSecOps demo on VirtualBox.
